

Chapter 1: Computer Skills

Class 2 – Input, Output & Storage Devices in Daily Life

Learning Objectives

After completing this lesson, students will be able to:

- Understand the meaning of input, output, and storage devices.
 - Identify common input, output, and storage devices.
 - Explain the functions of different computer devices.
 - Classify computer devices into the correct categories.
 - Understand how these devices are used in everyday life.
 - Develop basic computer knowledge through real-life examples.
-

Introduction

A computer works by accepting information, processing it, storing it, and displaying the results. To perform these tasks, a computer uses different types of devices called **Input Devices**, **Output Devices**, and **Storage Devices**.

These devices help us interact with the computer and complete various tasks in schools, homes, offices, hospitals, and banks.

What are Input Devices?

Input devices are hardware devices used to enter data and instructions into a computer.

Examples of Input Devices

- Keyboard
- Mouse
- Scanner
- Microphone
- Webcam
- Joystick

- Touchscreen
 - Barcode Scanner
-

Keyboard

A **keyboard** is the most common input device.

Uses

- Typing letters and numbers
 - Writing documents
 - Entering commands
 - Using shortcut keys
-

Mouse

A **mouse** is a pointing device used to control the cursor.

Uses

- Clicking
 - Double-clicking
 - Dragging and dropping
 - Selecting files and folders
 - Drawing in Paint
-

Scanner

A **scanner** converts printed documents and photographs into digital form.

Uses

- Scanning documents
 - Saving certificates
 - Digitizing photographs
-

Microphone

A **microphone** is used to record sound.

Uses

- Voice recording
 - Online classes
 - Video calls
 - Voice commands
-

Webcam

A **webcam** captures photos and videos.

Uses

- Online meetings
 - Video conferencing
 - Online learning
 - Recording videos
-

What are Output Devices?

Output devices display or produce the results processed by the computer.

Examples of Output Devices

- Monitor
 - Printer
 - Speakers
 - Projector
 - Headphones
-

Monitor

A **monitor** displays text, pictures, videos, and other information.

Uses

- Watching videos
 - Reading documents
 - Viewing presentations
 - Playing educational games
-

Printer

A **printer** produces a paper copy (hard copy) of digital documents.

Uses

- Printing assignments
 - Printing photographs
 - Printing certificates
 - Printing reports
-

Speakers

Speakers produce sound from the computer.

Uses

- Listening to music
 - Watching videos
 - Online learning
 - Educational audio lessons
-

Projector

A **projector** displays the computer screen on a large surface.

Uses

- Classroom teaching
- Business presentations
- Seminars

- Training sessions
-

What are Storage Devices?

Storage devices are used to save data, files, pictures, videos, and documents for future use.

Examples of Storage Devices

- Hard Disk (HDD)
 - Solid State Drive (SSD)
 - Pen Drive
 - Memory Card
 - CD/DVD
 - External Hard Disk
-

Hard Disk Drive(HDD)

The **Hard Disk** is the main storage device inside a computer.

Uses

- Stores operating system
 - Saves software
 - Stores files and folders
 - Keeps documents permanently
-

Solid State Drive (SSD)

An **SSD** stores data like a hard disk but works much faster.

Uses

- Faster computer performance
 - Faster file access
 - Quick system startup
-

Pen Drive

A **Pen Drive** is a portable storage device.

Uses

- Carrying files
 - Sharing documents
 - Transferring data
 - Backup storage
-

Memory Card

A **Memory Card** stores data in mobile phones, cameras, and tablets.

Uses

- Saving photos
 - Storing videos
 - Keeping music files
 - Expanding storage
-

CD/DVD

A **CD/DVD** is an optical storage device.

Uses

- Storing music
 - Saving videos
 - Installing software
 - Data backup
-

Device Classification

Input Devices	Output Devices	Storage Devices
Keyboard	Monitor	Hard Disk

Input Devices	Output Devices	Storage Devices
Mouse	Printer	SSD
Scanner	Speakers	Pen Drive
Microphone	Projector	Memory Card
Webcam	Headphones	CD/DVD

Uses of Computer Devices in Daily Life

Computers and their devices are used in many places:

Schools

- Online learning
- Smart classrooms
- Computer labs
- Project presentations

Homes

- Homework
- Entertainment
- Online shopping
- Video calls

Hospitals

- Patient records
- Medical reports
- Scanning documents

Banks

- Money transactions
- Printing receipts
- Customer records

Offices

- Typing documents
- Printing reports
- Online meetings
- Data storage

Importance of Input, Output & Storage Devices

These devices help us to:

- Enter information into the computer.
- View and hear computer output.
- Save important files safely.
- Share information easily.
- Complete tasks quickly and accurately.

Basic Computer Terminology

Term	Meaning
Input Device	A device used to enter data into a computer.
Output Device	A device that displays or produces results.
Storage Device	A device used to save data for future use.
Keyboard	Used for typing.
Mouse	Used to control the pointer.
Monitor	Displays information on the screen.
Printer	Prints documents on paper.
Hard Disk	Stores data permanently.

Did You Know?

- A keyboard has over **100 keys** on most standard keyboards.
- An SSD is faster than a traditional hard disk.
- A pen drive is small enough to fit in your pocket but can store many files.
- Projectors help teachers display lessons to the whole class.

Points to Remember

- **Input devices** are used to enter data into a computer.
- **Output devices** display or produce the results.
- **Storage devices** save files and information for future use.
- Every computer uses different hardware devices to perform different tasks.
- Proper care of computer devices increases their lifespan.
- Computers and their devices are used in many areas of daily life.
