Introduction

Artificial Intelligence (AI) has transformed digital creativity by enabling users to generate high-quality images from simple text descriptions. These text descriptions are called **image prompts**. The more detailed and structured the prompt, the better the generated image.

Today, AI image generation is widely used in education, advertising, branding, graphic design, architecture, animation, gaming, and social media. Students can use AI image tools to create posters, infographics, educational illustrations, logos, presentations, and creative projects quickly and efficiently.

This lesson introduces the fundamentals of AI image generation and teaches students how to write effective prompts to create professional-quality visual content.

What is AI Image Generation?

AI Image Generation is the process of creating digital images using Artificial Intelligence based on written instructions (text prompts).

Instead of drawing manually, users describe what they want, and the AI creates the image automatically.

Importance of AI Image Generation

AI image generation helps students:

- Visualize ideas quickly.
 - Create educational graphics.
 - Design posters and presentations.
 - Improve creativity.
 - Save design time.
 - Develop digital design skills.
 - Support project work.
 - Enhance communication through visuals.
-

Popular AI Image Generation Tools

Students can use AI image generation tools such as:

- ChatGPT Image Generation
- Adobe Firefly
- Microsoft Designer
- Canva AI
- Google Gemini (Image Features)
- Leonardo AI
- Ideogram
- Midjourney

Each tool provides different features for creative design and visual content creation.

Components of an Effective Image Prompt

A good image prompt includes:

1. Subject

What should appear in the image?

Example: A smart classroom.

2. Style

How should the image look?

Examples:

- Realistic
 - Digital Art
 - Cartoon
 - Watercolor
 - 3D Illustration
 - Flat Design
-

3. Environment

Where is the subject located?

Example:

A modern classroom with interactive digital displays.

4. Lighting

Describe the lighting.

Examples:

- Bright daylight
 - Soft lighting
 - Golden hour
 - Studio lighting
-

5. Colors

Mention preferred colors.

Example:

Blue and white color theme.

6. Quality

Specify image quality.

Examples:

- HD
 - 4K
 - Ultra-realistic
 - High Resolution
-

Prompt Formula for AI Images

A simple image prompt structure is:

Subject + Style + Environment + Colors + Lighting + Quality

Example Prompt

"Create a realistic 4K image of a modern smart classroom with students using AI-powered tablets, blue and white classroom theme, bright natural lighting, highly detailed and professional educational environment."

Types of Creative Image Prompts

Educational Posters

Used for:

- School awareness campaigns
