

Chapter 2: Prompt Engineering Basics

Class 10 – Prompting for Presentations & Learning

Learning Objectives

After completing this lesson, students will be able to:

- Understand how AI can support learning and presentation preparation.
 - Write effective prompts to generate study notes and presentation outlines.
 - Create AI prompts for quizzes, worksheets, and revision materials.
 - Organize AI-generated content into structured presentations.
 - Improve AI-generated learning materials by refining prompts.
 - Use AI responsibly for academic learning and classroom presentations.
-

Introduction

Artificial Intelligence (AI) has become an excellent learning assistant for students. It can help prepare study notes, explain difficult topics, create quizzes, generate presentation outlines, and organize learning materials.

However, AI produces useful results only when students write **clear and effective prompts**. A well-written prompt helps AI understand the learning objective, audience, format, and level of detail required.

By learning how to write presentation and learning prompts, students can save time, improve understanding, and create professional classroom presentations.

What is Prompting for Learning?

Prompting for Learning means writing instructions that help AI generate educational content such as:

- Study Notes
- Lesson Summaries
- Quiz Questions

- Practice Worksheets
 - Revision Materials
 - Project Ideas
 - Homework Assistance
-

Why Use AI for Learning?

AI helps students to:

- Learn difficult concepts easily.
 - Save study time.
 - Organize information.
 - Prepare revision notes.
 - Create practice questions.
 - Improve understanding.
 - Build confidence before examinations.
-

Prompting for Study Notes

Students can ask AI to prepare simple and organized notes.

Example Prompt

Prepare short study notes on **Photosynthesis** for Class IX students using headings and bullet points.

AI Output Example

Topic: Photosynthesis

- Definition
 - Process
 - Importance
 - Factors affecting photosynthesis
 - Applications
-

Prompting for Presentation Outlines

AI can organize presentation content into logical slides.

Example Prompt

Create a **5-slide presentation outline** on Renewable Energy for Class IX students.

Example Outline

Slide 1: Title & Introduction

Slide 2: Types of Renewable Energy

Slide 3: Advantages

Slide 4: Real-life Applications

Slide 5: Summary & Conclusion

Prompting for Quiz Questions

Students can generate practice questions.

Example Prompt

Generate **10 multiple-choice questions** on Artificial Intelligence for Class IX students.

Example Output

- What is AI?
 - Which is an AI productivity tool?
 - Why is AI useful in education?
-

Prompting for Lesson Summaries

AI can summarize lessons for quick revision.

Example Prompt

Summarize the chapter on Water Conservation into **10 important points** for revision.

Prompting for Homework Assistance

AI can guide students while completing homework.

Example Prompt

Explain Newton's First Law with two real-life examples suitable for Class IX students.

Students should understand the explanation and write answers in their own words.

Prompting for Project Ideas

Students can use AI to generate creative ideas.

Example Prompt

Suggest five science exhibition project ideas for Class IX students using eco-friendly materials.

Organizing AI-generated Learning Content

Students should organize AI-generated information under headings.

Example Structure

- Title
- Introduction
- Main Concepts
- Examples

- Advantages
- Conclusion
- References

Organized content makes learning easier.

Improving AI-generated Responses

If AI does not give the desired answer, students can improve the prompt by asking AI to:

- Use simpler language.
 - Add examples.
 - Create bullet points.
 - Explain step by step.
 - Prepare a table.
 - Make the answer shorter.
 - Include diagrams or flowchart suggestions.
-

Prompt Formula for Learning

A useful prompt structure:

Task + Topic + Class Level + Format + Length

Example

Create a **5-slide presentation** on Climate Change for Class IX students using simple English and bullet points.

Best Practices for Learning Prompts

Students should:

- Write clear instructions.
- Mention the class level.
- Specify the output format.
- Keep prompts focused on one task.

- Review AI-generated content.
 - Verify important facts.
 - Rewrite answers in their own words.
-

Responsible Use of AI in Learning

Students should:

- Use AI to understand concepts.
 - Avoid copying answers directly.
 - Verify information from trusted sources.
 - Respect academic honesty.
 - Use AI as a learning assistant.
 - Protect personal information while using AI.
-

Real-Life Applications

Learning prompts are useful for:

- Homework
 - School projects
 - Presentation preparation
 - Exam revision
 - Quiz preparation
 - Assignment writing
 - Science exhibitions
 - Group discussions
 - Online learning
 - Teacher lesson planning
-

Career Opportunities

Prompting and AI learning skills are valuable in careers such as:

- Teacher
- AI Prompt Engineer
- Educational Content Developer

- Instructional Designer
 - Research Analyst
 - Software Developer
 - Digital Learning Specialist
 - Technical Writer
 - Content Creator
 - Educational Consultant
-

Revision

Students should revise:

- Learning Prompts
 - Study Notes Prompts
 - Presentation Outline Prompts
 - Quiz Prompt Writing
 - Lesson Summary Prompts
 - Homework Assistance
 - Project Idea Prompts
 - Prompt Improvement
 - Responsible AI Use
-

Did You Know?

- AI can create complete presentation outlines in just a few seconds.
 - Many students use AI to generate revision notes and self-practice quizzes.
 - Well-written prompts save time and improve the quality of AI-generated learning materials.
 - Teachers also use AI tools to prepare lesson plans, worksheets, and classroom activities.
-

Points to Remember

- AI can support learning by generating notes, quizzes, summaries, and presentation outlines.
- Clear prompts produce more useful educational content.
- Always include the topic, class level, and output format in learning prompts.
- Review and verify AI-generated information before using it.
- Use AI responsibly and always complete school work honestly.
